Innovation and Uniqueness

Identified Opportunities

Customer and User Needs

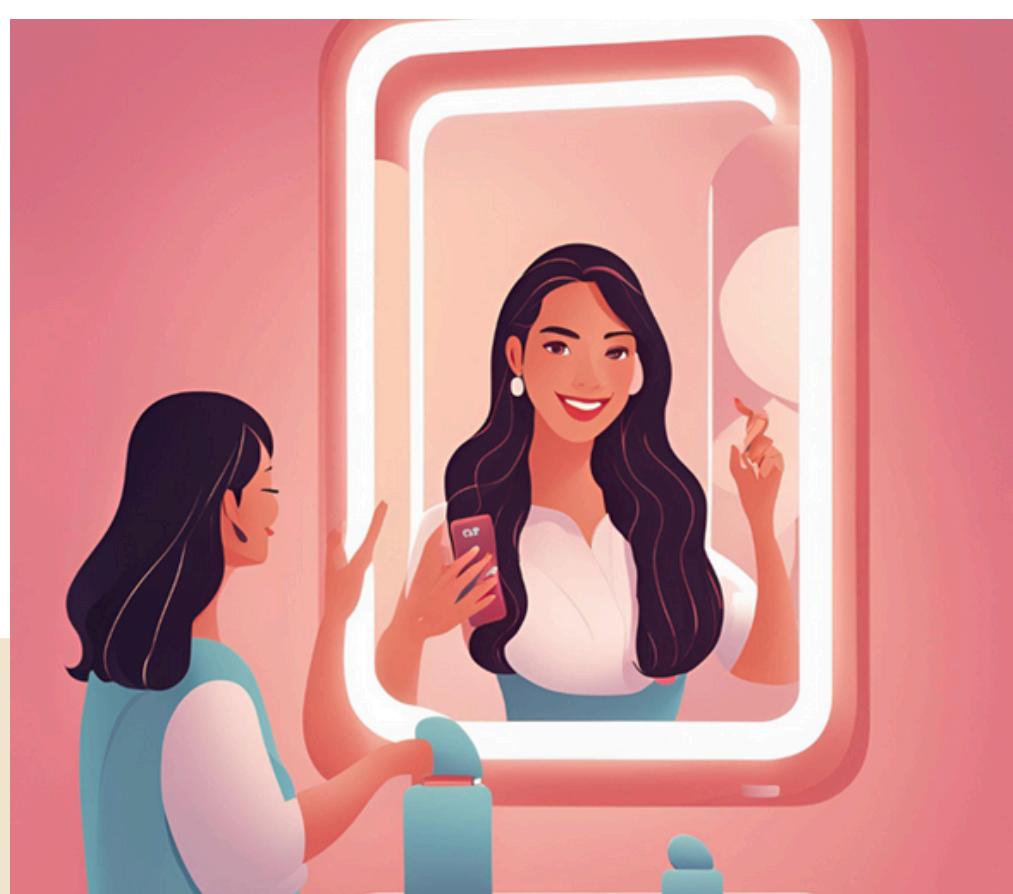

Personalized Fashion Guide:
AI-based outfit suggestions.

Occasion-Specific Styling:
Recommendations for different events.

Eco-Friendly Fashion: AI suggests sustainable brands.

Wardrobe Optimization:
Reduces unnecessary shopping.

Consumer Adoption: AI educates on trends and fashion.

Concept Development and Testing

Concept Development

- Solves fashion challenges: styling uncertainty, online shopping issues, sustainability.
- Uses AI recommendations, trend forecasting.
- Data-driven, interactive personal styling.

Concept Testing

1. User Testing Across Age Groups

- Teens (16–25): Trend forecasting, social sharing.
- Adults (26–45): AI outfit recommendations, time-saving.
- Older Adults (46+): sustainability tips.
- Results: 85% styling confidence, 70% fewer online returns.

2. Beta Testing

- Tested AI recommendations
- Improved customization, AI learning.

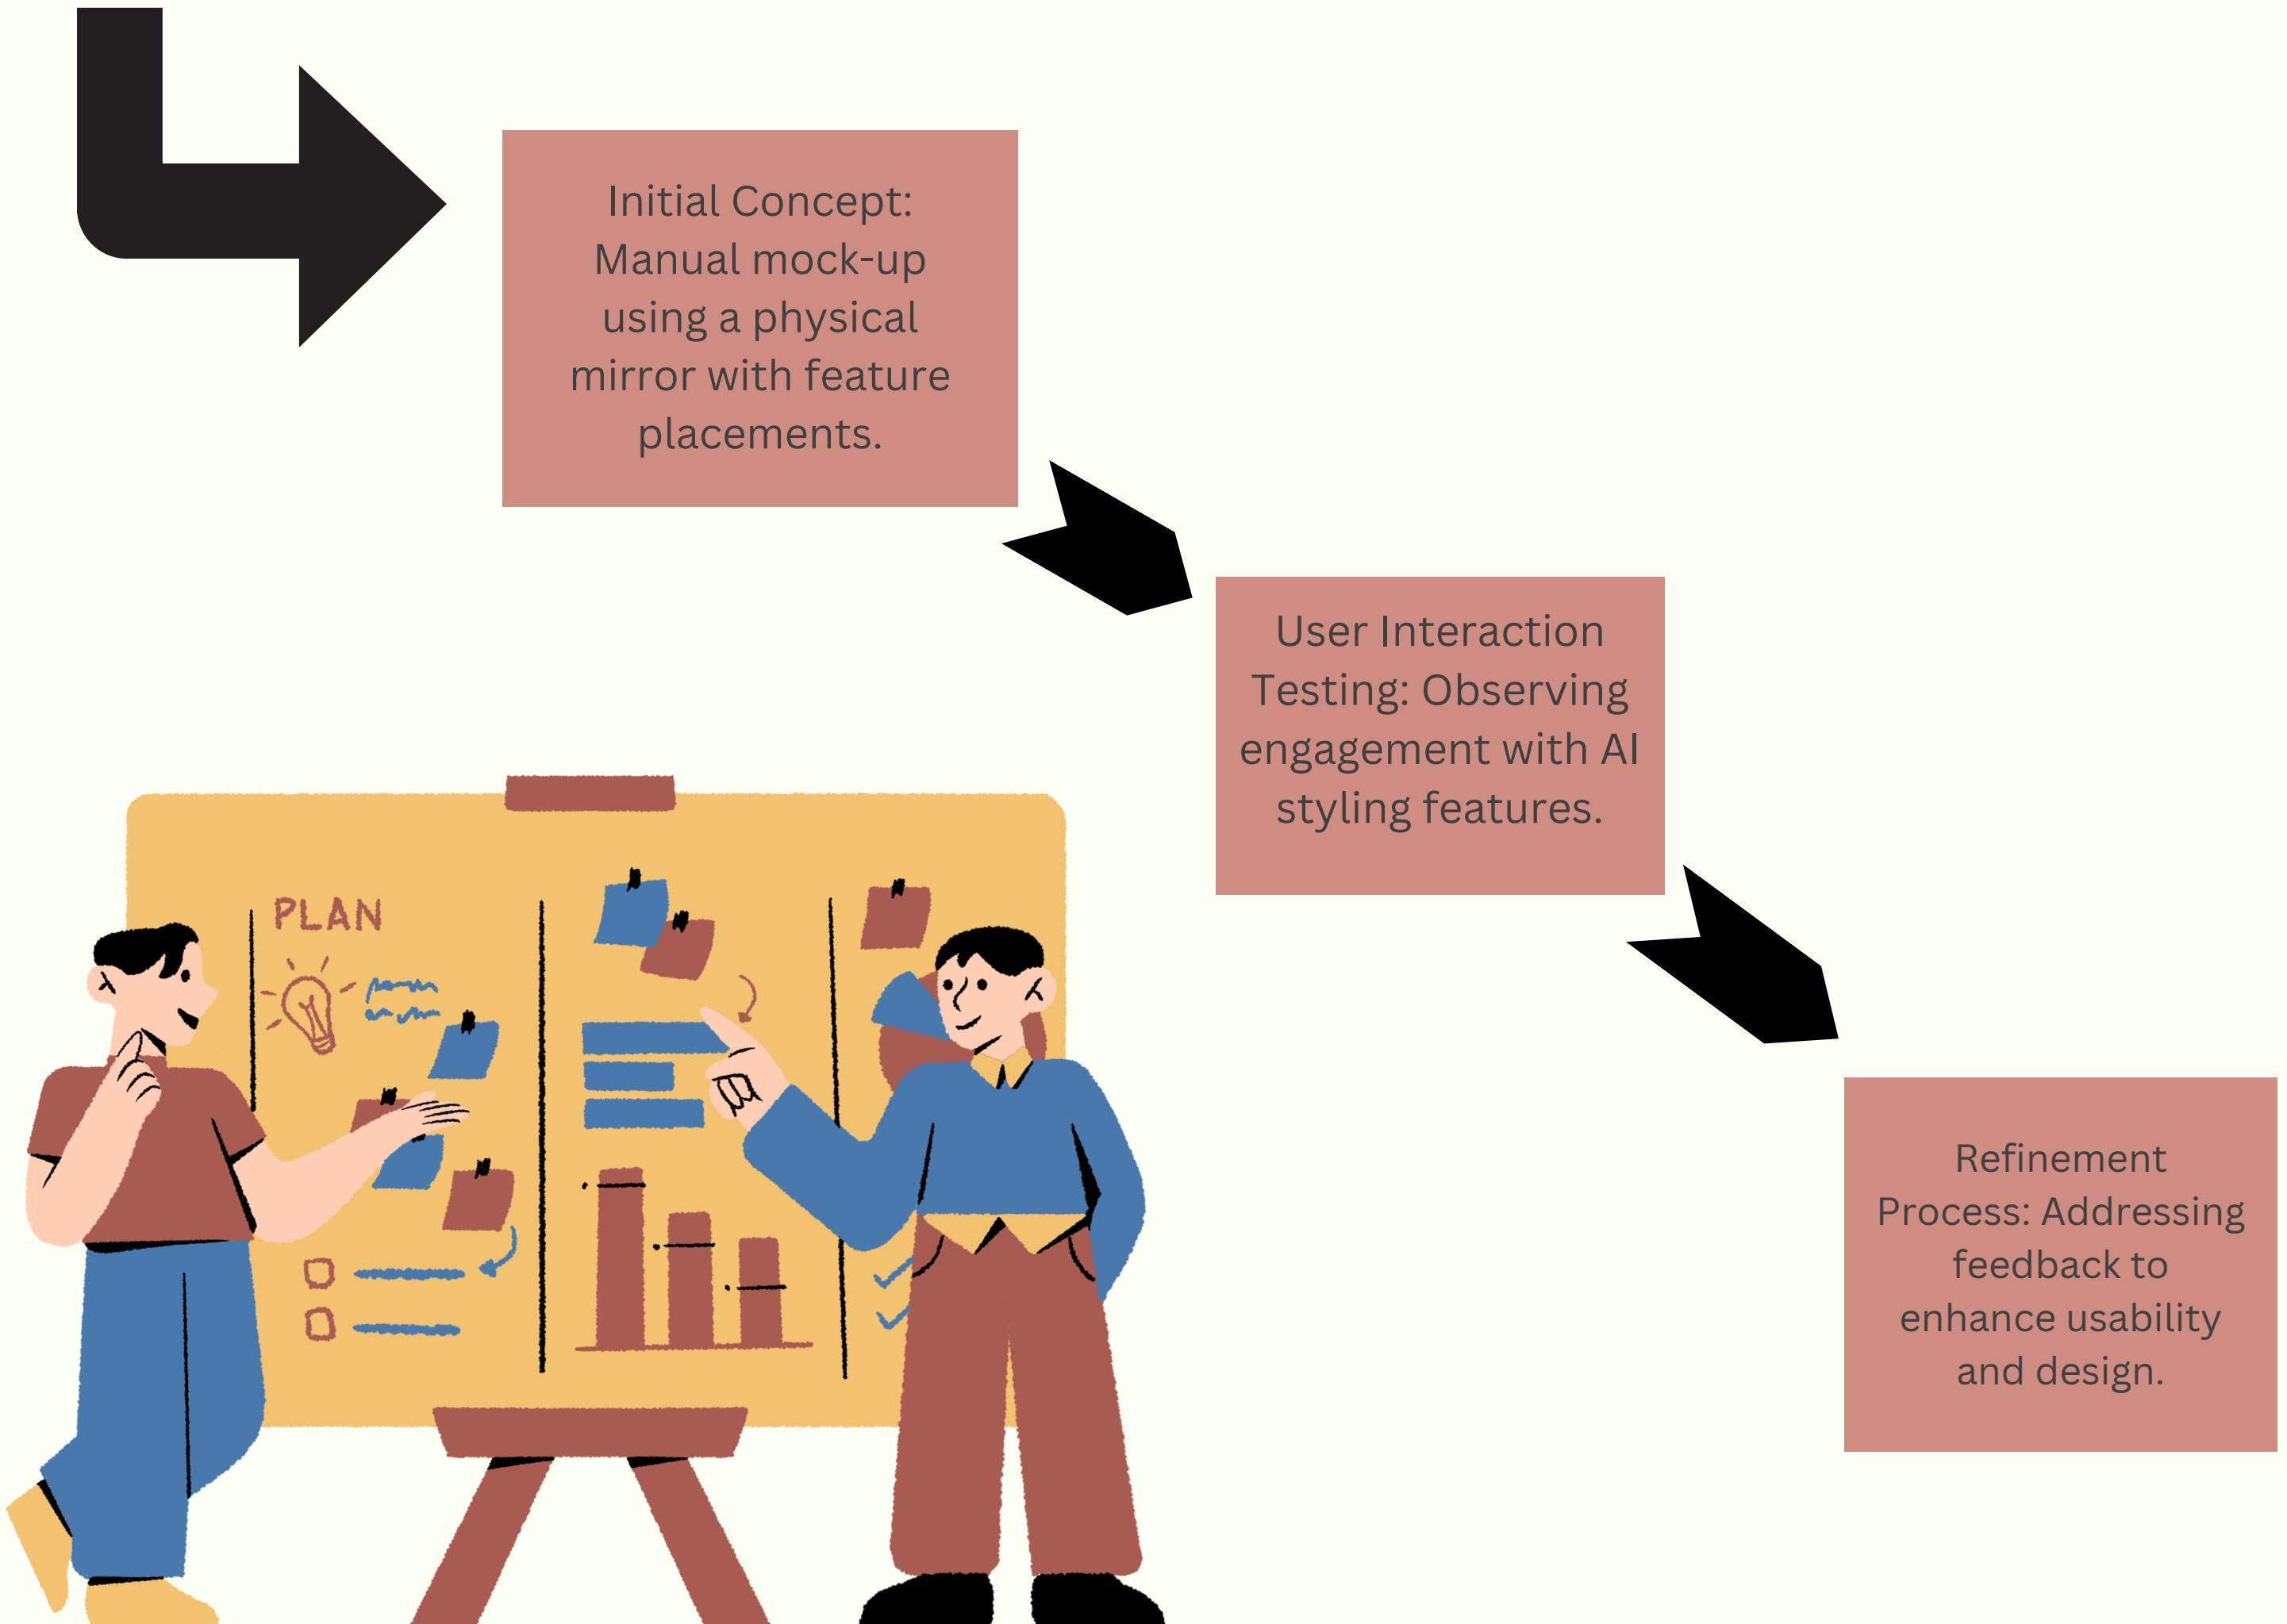

3. Retail & E-commerce Integration

- Partnered with brands.
- Increased engagement, reduced return rates.

4. Key Refinements

- Smarter AI styling.
- Improved AI for all body types.
- User-friendly interface.
- Sustainability insights.

PROTOTYPING

Plan for Creating and Appropriating Value

Short-Term (1 Year): MVP launch, user feedback collection, and initial AI refinement.

Mid-Term (2 Years): Brand collaborations, premium features, and weather-based styling.

Long-Term (3+ Years): Global expansion, improved AI, and additional sustainability features.

Funding Strategy: Fashion brand investments for growth.

NEW PRODUCT DEVELOPMENT METHODS APPLIED
